Curricular Activities

The board recognizes the important role that curricular and extracurricular activities play in a student's overall education. Curricular activities are those programs that are closely associated with the curriculum and require participants to enroll in a regularly scheduled course during the instructional day. Extracurricular activities, in contrast, are not necessarily closely linked to the curriculum, are not graded, do not offer credit, and do not require participants to be enrolled in particular courses during the instructional day. The superintendent or designee shall maintain a listing of the district's curricular and extracurricular activities. The superintendent is further authorized to establish eligibility criteria for student participation in both curricular and extracurricular activities.
